

The Isokinetic Medical Group is proud to announce that the 24th Annual International Sports Rehabilitation and Traumatology Conference will be held in **London from April 11th to 13th 2015**.

The International Sports Rehabilitation and Traumatology Conference is organised by Isokinetic Medical Group, the 11th Medical Centre of Excellence to be accredited by FIFA, and in conjunction with the FIFA & UEFA Medical Committees. The Conference will also host the annual meeting of the 41 FIFA Medical Centres of Excellences from all around the world.

The focus will be on **Football Medicine Strategies for Player Care**, probably the most important aspect to be considered when talking about sport. This main theme will be analysed from many different points of view by covering the full spectrum of topics of interest for every practitioner and party involved. An outstanding selection of 186 internationally recognised experts in Football Medicine and Sports Medicine from 27 countries will converge to share their knowledge and expertise.

The previous edition of the conference, in Milan, “scored a goal” in terms of participation: 2259 delegates attended the scientific sessions and 77 countries were represented. This means that it is the largest Sports Medicine event in the world outside of the American College of Sports Medicine meeting, and the largest conferences on Football Medicine.

Our aim though is to make it even more international and truly representative of football. We need your help though, and encourage you to get a strong representation from your Country.

You can stay up to date with the latest conference news through our Twitter: @footballmed and Facebook: Football Medicine Strategies accounts
